

28 Volt Input – Dual Voltage Output – Isolated 5 to 12 Watt Switching DC/DC Converter with Dual Low Drop Out Linear Output Regulators

FEATURES

- 175 °C operation
- Foldback linear regulator
- Low output ripple
- Shutdown control
- Linear regulators provide excellent line and load regulation

APPLICATIONS

- High temperature applications
- Petroleum reservoir monitoring
- Petroleum logging tools
- Petroleum LWD and MWD tools
- Avionics

The TX5406 is a 5 to 12 watt isolated power supply designed to operate at case temperatures to 175 °C. It features a unique combination of isolated switcher and dual low dropout linear output regulators. The TX5406 output regulators provide superior regulation, low output noise and well behaved short circuit performance.

These devices may be operated with any load from 0 to 100% and will sustain a continuous short circuit on either output since the linear regulators fold back to a very small current.

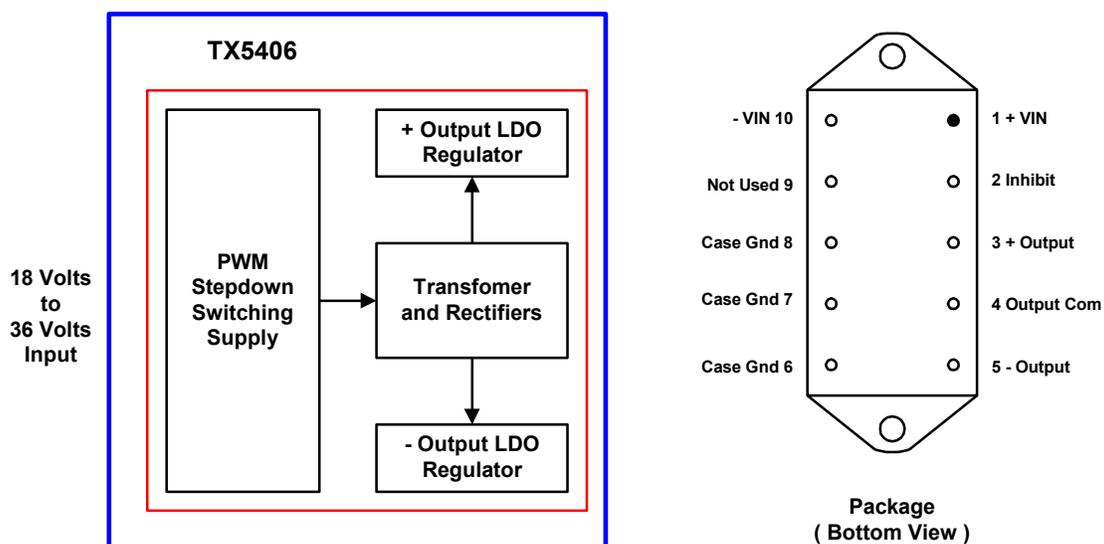

The TX5406 contains internal bypass capacitors on both the input and outputs. However, some application may require additional external bypass capacitors on the input and outputs.

The TX5406 is housed in a 10 pin hermetic power package with pin spacing of 0.4" and row spacing of 0.8". Free air thermal resistance is approximately 35 °C per watt. Part numbers are:

TX5406-1 ± 5 Volts at 500 mA per output

TX5406-2 ± 12 Volts at 500 mA per output

TX5406 Block Diagram

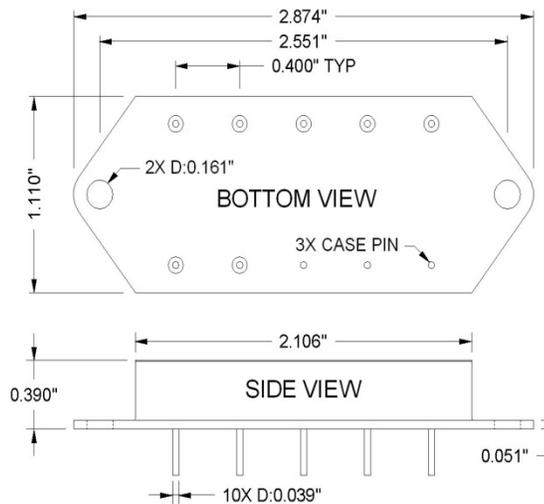

TX5406 Specifications

Absolute Maximum Ratings		Shutdown		Isolation	
Input voltage range	18 – 36VDC	Shutdown is affected by pulling the Inhibit pin to -Vin with an open drain / collector circuit. Normal operation will occur when the Inhibit pin is left open.		<ul style="list-style-type: none"> 500 VDC isolation from any input pin to any output pin. 500 VDC isolation from any input pin or output pin to case. 	
Operating temperature (T _{case})	175°C				
Storage temperature	200°C
